16 10 - Curriculum Vitae of Dr. Myers. 1476

17

18

19

20

21

22

23

1 (The trial proceedings commenced at 9:05
2 a.m., Wednesday, February 8, 1995, the
3 Honorable Kenneth Johnson presiding.)

4 (The following proceedings were conducted
5 out of the presence of the jury.)

6 MR. WAGNER: Your Honor, your
7 Honor entered a motion, or an order on January
8 23, 1995, concerning the exclusion of
9 cumulative expert testimony.

10 The witness who I believe is going to be
11 first called this morning by the plaintiffs is
12 Dr. Myers. Dr. Myers' 26(b) disclosure states
13 that he is going to testify that cigarette
14 smoking causes lung cancer, Richard Rogers'
15 cigarette smoking was the cause of lung cancer,
16 and cigarette smoking is addictive.

17 I believe, your Honor, we have had at this
18 point tons of testimony on those subjects.
19 Dr. Myers cannot bring anything to this
20 courtroom or to this jury that they haven't
21 heard for the last several days of testimony
22 through both Dr. Burns and Dr. Jay.

23 And we would, therefore, ask the Court to

1 exclude this repetitious and cumulative
2 testimony from Dr. Myers.

3 One other matter is that we anticipate
4 that Dr. Myers, if he is allowed to testify,
5 and we don't believe that he should, but that
6 if he does, that he will attempt to testify
7 that Richard Rogers was addicted, and that,
8 also -- that is not within his 26(b)
9 disclosure.

10 So, we move, first of all, that his
11 testimony be excluded in toto because it is
12 cumulative and should be barred by the Court's
13 previous order entered in this case; and,
14 secondly, that if he is allowed to testify, he
15 not be allowed to testify any opinions as to
16 Richard Rogers' addiction for the reasons
17 stated.

18 THE COURT: We'll let the
19 plaintiffs respond here, but one of the reasons
20 that we have -- that you suggested and I agreed
21 that we would have a 48-hour disclosure so
22 these matters can be taken up in the evening.
23 This is not the kind of matter I want to take

1 up at 9 a.m. while I have a jury in the room.
2 This is exactly why predisclosure so -- just in
3 terms of functions, this is the kind of thing I
4 want you to bring up the night before, not
5 after you've had a night to think about it and
6 several days. But that's exactly why we do it
7 like this, so that I don't have a jury in the
8 room waiting for us to take up arguments on
9 matters that you knew would -- you knew all
10 this last night, so --

11 In any event, the motion is made and I
12 will let the plaintiffs respond.

13 MR. HARDY: Your Honor, could I
14 say something before the plaintiffs respond?

15 THE COURT: Sure.

16 MR. HARDY: I just want to
17 clarify things for the record of this trial.
18 Philip Morris joins in the objection, and I did
19 want to clarify. Is it necessary for us, on
20 objections for the other defendants, to
21 indicate that they join in the objections or
22 can we have an understanding that if one
23 defendant objects, that the objection stands as

1 to all defendants?

2 THE COURT: I wouldn't have any
3 problem with a standing rule like that.
4 Obviously it makes for better decorum and
5 procedure that not all four -- counsel for all
6 four defendants need to make an objection. And
7 I would certainly have no problem with a
8 standing -- with the understanding that when
9 one defense counsel makes an objection, that
10 the others join in it, perhaps, unless -- I
11 guess I can't hypothecate something in my own
12 mind that there would be some particular
13 objection that somebody would not want to join
14 in, but I don't have any problem with
15 understanding that all defendants join in the
16 objection.

17 And, matter of fact, I understood it, and
18 that has been I think how we've been proceeding
19 with that understanding.

20 MR. HARDY: I believe so, but I
21 just want to be sure.

22 THE COURT: If there's additional
23 grounds for objections, certainly another

1 counsel can asked to be recognized to state an
2 additional grounds for exclusion or an
3 objection, and certainly that's appropriate. I
4 certainly don't have any problem with that
5 understanding.

6 Let the record show that that's all of our
7 understanding, that when one defense counsel
8 makes an objection, all the others join in
9 without specifically each time having to say
10 so.

11 Plaintiffs' response to the motion for
12 exclusion of the testimony of Dr. Myers.

13 MR. MICHAEL HOLLAND: Thank you.

14 Dr. Myers comes at this question from his own
15 experience, his own background and specialty,
16 particularly with his background and training
17 and experience in the field of public health,
18 that's the context in which he has addressed
19 the issues. We have only had two witnesses who
20 have testified, thoracic surgeon and
21 pulmonologist. And Dr. Myers approaches these
22 questions from his own area of expertise.

23 With respect to Richard Rogers' addiction,

1 we do not intend to ask him specifically about
2 Richard Rogers' addiction and that is not an
3 area we intend to conduct examination with him.

4 THE COURT: What's the other area
5 that he brings, he's going to talk about? Dick
6 said addiction. What else was it, addiction
7 and --

8 MR. WAGNER: The 26(b)
9 disclosure, Judge, cigarette smoking causes
10 lung cancer, Richard Rogers' smoking was the
11 cause of his lung cancer, and cigarette smoking
12 is addictive.

13 THE COURT: That's the 26(b)
14 disclosure, which of those is he --

15 MR. MICHAEL HOLLAND: We intend
16 to ask him about the fact that cigarette
17 smoking causes lung cancer and that it's
18 addictive.

19 THE COURT: But just not with
20 Richard Rogers?

21 MR. MICHAEL HOLLAND: We don't
22 intend to bring in Richard Rogers.

23 THE COURT: It is not a topic

1 we've not ventured into. I mean, the point is
2 that it is cumulative and we have had
3 discussions in all -- in several days of trial
4 about two times is actually cumulative, but
5 when does it become cumulative to the point of
6 exclusion, and so this will be the third
7 witness to testify as to two of those points;
8 right?

9 MR. MICHAEL HOLLAND: He will,
10 but, I mean, those are central points. And I
11 think the fact that we have experts that are
12 coming from separate fields of expertise, he
13 has his own experiences with respect to
14 diagnosis and treatment of people that have
15 cancer. He has his own experiences concerning
16 contact and treatment of people who are
17 addicted. And he brings those to bear and I
18 think they are important for the jury's
19 consideration.

20 THE COURT: Are there other
21 witnesses that the plaintiff plans on calling
22 to cover these same topics?

23 MR. MICHAEL HOLLAND: There may

1 be, but there may not be. We are aware of the
2 cumulative --

3 THE COURT: So the answer is yes
4 and no?

5 MR. MICHAEL HOLLAND: Well --

6 THE COURT: Maybe?

7 MR. MICHAEL HOLLAND: Maybe.

8 THE COURT: Definitely maybe?

9 MR. WARREN HOLLAND: It's a 48
10 hour-48 hour question, your Honor.

11 THE COURT: I've still not gotten
12 any note of any 48-hour disclosures to me, so
13 it's --

14 I am going to overrule the objection and
15 allow the witness to testify.

16 Any other motions?

17 Just procedurally, let me just emphasize
18 it again, those are the kinds of motion with a
19 prior disclosure requirement that I want made
20 the night before so that we can take those up
21 and discuss those so we can have -- so I feel
22 like I've had sufficient time to consider the
23 motion and to examine it. And if I had that

1 motion made last night, I might have wanted,
2 perhaps, to consider it further, but it is the
3 kind of thing that I do want you to make,
4 please, the night before. That's what we're
5 here for.

6 I've restructured my life like you've
7 restructured yours. This is it. This is what
8 I do from now till whenever we get finished.
9 Just like you have made special provision to be
10 here. So these are the kind of things that I
11 expect you to raise the night before.

12 I think with that, though, having handled
13 that motion, we're ready to bring the jury in,
14 please, and plaintiff's next witness.

15 (The jury entered the courtroom at 9:14
16 a.m.)

17 THE COURT: Jury may be seated.
18 Good morning. Everybody okay? Hanging in
19 there all right? You started redecorating the
20 jury room yet? That coming? Carpet and
21 curtains are coming, I can feel it.

22 For the record, plaintiffs call the next
23 witness, please.

1 MR. MICHAEL HOLLAND: Plaintiffs

2 call Dr. Woodrow Myers.

3 (At this time the witness, Dr. Myers, was

4 sworn in by the Court.)

5 WOODROW A. MYERS, JR., M.D.,

6 having been called on behalf of the plaintiff,

7 having been first duly sworn to tell the truth, the

8 whole truth and nothing but the truth relating

9 to said matter, was examined and testified as

10 follows:

11 DIRECT EXAMINATION,

12 QUESTIONS BY MR. MICHAEL W. HOLLAND:

13 Q Could you state your name, please.

14 A Woodrow Augustus Myers, Jr.

15 Q And where do you live?

16 A Indianapolis.

17 Q What is your profession?

18 A I'm a physician and I am the corporate medical

19 director of The Associated Group in

20 Indianapolis, and I'm also the corporate

21 medical director of one of its subsidiaries

22 called Athena of North America.

23 Q Could you explain what your responsibilities

1 are in your current position?

2 A There are a variety of responsibilities. As
3 corporate medical director for the parent
4 company of The Associated Group, I'm
5 responsible for responding to any issues that
6 are medical in nature, especially those issues
7 for which there is some external interest.
8 Typical example might be the debate regarding
9 health care reform.

10 In my role with Athena of North America,
11 my job is to manage a strategic business unit
12 within that corporation whose major
13 responsibilities are medical information
14 systems, looking at health care outcomes,
15 looking at guidelines for medical care, looking
16 at the quality of medical care, looking at
17 profiles of physicians and other providers, and
18 providing those to other subsidiaries within
19 our company and to some external hospitals,
20 doctors' practices and so on.

21 Q Are you married?

22 A Yes.

23 Q Do you have children?

1 A I have two children.

2 Q Can you tell us your educational background,
3 please?

4 A I was -- I finished grade school here in
5 Indianapolis in IPS. I was a -- finished high
6 school at Shortridge High School back in the
7 days when it was a high school before it became
8 a junior high, at 34th and Meridian. I left
9 high school to attend Stanford University,
10 where I received my bachelor's degree in
11 science with a major in biology in 1973. I
12 then attended medical school at the Harvard
13 Medical School in Boston, Massachusetts, where
14 I received my M.D. degree in 1977.

15 After medical school I completed an
16 internship in internal medicine at the Stanford
17 University Medical Center in California,
18 followed by a residency in internal medicine at
19 the same institution, followed by a fellowship
20 in critical care medicine in the intensive care
21 units at Stanford University Medical Center.

22 I also completed a fellowship in health
23 care policy. It was a combined program at

1 Stanford University and the University of
2 California, San Francisco, and I followed that
3 with a master's in business administration that
4 I received from the Stanford University School
5 of Business.

6 Q During the course of your medical training, did
7 you have occasion to become actively involved
8 in the treatment of patients?

9 A Yes.

10 Q And then when you were obtaining your M.B.A.
11 and thereafter, did you also remain involved in
12 the treatment of patients?

13 A Yes.

14 Q Can you explain that a little bit?

15 A I did my M.B.A. degree simultaneously with my
16 fellowship in critical care medicine, so I was
17 actively practicing in the I.C.U.s and
18 Stanford's emergency room and some other
19 emergency rooms around the Bay area trying to
20 make some extra money from my little -- when I
21 had my kids.

22 Then when I finished my fellowships, I
23 took a position on the faculty at the

1 University of California, San Francisco. I was
2 assistant professor of medicine there, and I
3 was also the quality assurance chairman for San
4 Francisco General Hospital. San Francisco
5 General Hospital is a county hospital in San
6 Francisco, it's the trauma center for San
7 Francisco County. There were four of us that
8 ran the medical surgical I.C.U., I was one of
9 those physicians.

10 In addition to the role that you have in
11 I.C.U., when you're on the faculty in that
12 role, you also see patients on the medical
13 wards, you lead teams of interns and residents
14 and nurses on the wards. I did that. I also
15 had clinical responsibilities in the San
16 Francisco medical clinics and in the emergency
17 rooms. I would see patients there as well.

18 In my spare time I had a part-time weekend
19 position at Oakland Hospital in Oakland,
20 California.

21 After I left San Francisco and after a
22 stint as the physician health adviser to the
23 Senate Committee on Labor and Human Resources

1 in Washington with Senator Ted Kennedy, I came
2 back to Indiana. After then Governor Bob Orr
3 asked me to be health commissioner for the
4 State of Indiana, a position I held for five
5 years. I was health commissioner four years
6 with Bob Orr and one year with Governor Evan
7 Bayh.

8 During that time I was an assistant
9 professor of medicine at the Indiana University
10 Medical Center, and my clinical role was that
11 of a attending physician in the emergency
12 medicine at Wishard Hospital, which I did
13 part-time during that period of time.

14 In 1990, I left Indiana for about a year
15 and three-quarter stint in New York City where
16 I was health commissioner for the City of New
17 York with then Mayor David Dinkins.

18 During that period of time, I did not
19 actively practice medicine as I had as
20 commissioner of Indiana, but I did have my
21 license to practice in New York. And I did
22 little things on the side for some employees
23 and friends, but I never formally practiced in

1 any clinical setting during that about a year
2 and three-quarters.

3 In August of '91, I came back to Indiana
4 where I took the position that I just described
5 as corporate medical director for The
6 Associated Group, and I was reinstated at my
7 prior faculty position at I.U. Medical Center,
8 but they gave me a little bit of a promotion to
9 clinical associate professor of medicine. And
10 they gave me my old job back in the Wishard
11 E.R. where I see patients with the interns and
12 residents and medical students on a regular
13 basis.

14 Q Doctor, with the exception of that time frame
15 when you were health commissioner in the City
16 of New York, have you continued to see patients
17 since the time of your medical training?

18 A Yes.

19 Q And you currently continue to see patients at
20 Wishard?

21 A I do. In fact, my last stint was last Friday.
22 And I will be there two days from now,
23 Friday -- this coming Friday.

1 Q Are you certified, board certified in any
2 fields of medicine?

3 A Yes, I am.

4 Q In what fields are those?

5 A I am board certified in internal medicine by
6 the American Board of Internal Medicine. I
7 received my board certification in medicine
8 after I finished my I.C.U. fellowship, or while
9 I was completing my I.C.U. fellowship. And I'm
10 also board certified in medical management by
11 the American College of Physician Executives.
12 And I got that I think sometime in the early
13 '80s.

14 Q What's involved in board certification?

15 A There are a number of prerequisites before
16 you're allowed to sit for the board
17 certification examination.

18 For the -- in internal medicine, you have
19 to have completed an internship and residency
20 at an accredited medical center. You had to
21 have good reports from your faculty and the
22 recommendation from the faculty that you're
23 allowed to sit for the boards. You have to

1 have had a fairly clean record while you're a
2 resident.

3 And then once you're allowed to sit for
4 the boards, it's a half a day examination,
5 multiple choice, and clinical scenarios, and
6 different kinds of questions that you have to
7 answer and you have to get a high percentage of
8 those right. And then they mail you back a
9 certificate saying whether you passed the
10 examination or not.

11 In the case of the American Board of
12 Medical Management, there are similar kinds of
13 prerequisites including completion of a
14 residency program. In addition, you had to
15 have significant experience as a manager within
16 a medical setting.

17 My qualifications to sit for that board
18 included the fact that I was chairman of the
19 quality assurance program at San Francisco
20 General Hospital for two and a half years,
21 which meant that I was responsible for
22 engineering all of the inspections of the
23 hospital by the Joint Commission on

1 Accreditation of Hospitals by the State
2 Department of Health and by other accrediting
3 bodies. I was responsible for making sure that
4 the credentialing files in the hospital were in
5 shape, that the governing body regulations were
6 appropriately set and so on.

7 That experience allowed me to sit for the
8 boards for the American Board of Medical
9 Management and I received my board
10 certification after I passed their test.

11 Q What does the field of internal medicine
12 involve?

13 A The best analogy is that, what pediatrics are
14 to children, internal medicine is to an adult.
15 The major issue for an internist is the care of
16 adult patients; and really encompasses the
17 whole spectrum of care other than that which is
18 specifically surgical.

19 The typical kinds of diseases that an
20 internist will take care of will include things
21 like diabetes and hypertension. Internists
22 traditionally take care of patients who have
23 those kinds of diseases when they're

1 hospitalized, as well as in an outpatient
2 setting.

3 Internal medicine is also the basis from
4 which other specialties are derived. For
5 instance, if you're going to be a cardiologist,
6 you have to have been an internal medicine
7 specialist first before they'll let you become
8 a cardiologist. If you're going to be a
9 gastroenterologist, you have to have done
10 internal medicine first.

11 Internal medicine physicians typically
12 receive referrals from a variety of other
13 physicians of complicated adult cases,
14 traditionally those that don't usually require
15 surgery, or where a question as to whether or
16 not the patient ought to go to surgery has been
17 raised. I guess, in essence, that's what
18 constitutes internal medicine.

19 There are many different branches of
20 internal medicine. I chose the critical care
21 branch early in my career, and now, because of
22 the responsibilities I have as full-time
23 corporate medical director, I find it's much

1 easier to schedule time in the emergency room
2 at Wishard than it is to schedule time in the
3 I.C.U., because, in the emergency room, you
4 can -- when you're done, you pass the patients
5 that you haven't quite finished with to the
6 next emergency room attending that comes along,
7 and the I.C.U. it's more difficult to do that
8 because of the continuity of care that's
9 involved because the patient is there for such
10 a long period of time.

11 Q Can you tell us what's involved generally in
12 the area of medical management in which you're
13 also board certified?

14 A Medical management is a relatively new field
15 for physicians. It's been over the past decade
16 or so that there's been an explosion of
17 interest in health care cost containment and
18 reforming the health care system.

19 Those physicians that have been involved
20 in management of clinical operations or in
21 management of government programs, or in
22 management of combinations elected a few years
23 ago to put together the requirements for making

1 a board to certify in that discipline.

2 And typically the people that are
3 certified in medical management are folks that
4 run large -- physicians who run large
5 hospitals, who run large clinics, who are
6 involved in major insurance enterprises, who
7 are working for the public health service, who
8 are state health commissioners. Those are the
9 kinds of folks typically who -- or managing
10 budgets that are designed to affect the health
11 of patients.

12 Q In your profession in addition to the positions
13 which you have explained, have you received any
14 appointments relevant to your area of -- areas
15 of expertise?

16 A When you say appointments, do you mean to
17 certain committees and so on?

18 Q Yes, sir. Yes, I have. I've had numerous
19 opportunities to participate in a variety of
20 committees related to various aspects of
21 health.

22 I was appointed to President Reagan's AIDS
23 Commission back in the mid-'80s. I became vice

1 chairman of that commission; unfortunately, I
2 had to resign from that position, along with
3 the chairman, because of the specific interests
4 of the White House that we felt weren't
5 conducive to moving forward in AIDS.

6 I've been on a variety of other
7 policy-making bodies and commissions throughout
8 my career. Been on a number of boards of
9 directors.

10 I'm on the board of directors today of the
11 Association for Health Services Research, which
12 is the major association in the United States
13 that oversees many of the research policies and
14 activities of universities who are interested
15 in health care, schools of public health that
16 are interested in health care.

17 I'm on the board of a number of
18 corporations. I've been on the board of a
19 number of corporations.

20 Today I'm on the board of Acordia of
21 Central Indiana, of Allmed Corporation. I've
22 been on the board of trustees of Stanford
23 University for five years. I'm currently on

- 1 the board of directors for Stanford Health
2 Systems, which is an entity that was spun off
3 by the board of trustees to manage Stanford's
4 hospitals, Stanford's Faculty Practice Plan,
5 and to oversee Stanford strategy for health
6 care reform in the California -- San Francisco
7 Bay area where they've got a very high
8 percentage of managed care, things are not
9 quite as settled as they are today here in
10 Indianapolis, in Indiana, from a health care
11 standpoint. So those are the kinds of things
12 I've been involved in and continue to be
13 involved in.
- 14 Q Where, Doctor, are you licensed to practice
15 medicine?
- 16 A I'm currently licensed to practice in the state
17 of Indiana, state of California, state of New
18 York, and in the District of Columbia.
- 19 Q Have you had clinical experience in treating
20 people who were suffering from diseases
21 associated with cigarette smoking?
- 22 A Yes.
- 23 Q Can you tell us what experience you've had in

1 that regard?

2 A Virtually all the settings where I've been
3 involved as a resident or as a faculty member
4 or as an attending physician, I've had occasion
5 to see patients who smoke cigarettes and who
6 have developed one or another of the
7 complications of their nicotine addiction.

8 I have seen patients with illnesses that
9 are fairly common from their cigarette smoking.
10 I've seen patients with illnesses that are less
11 common. I see patients every time I'm at
12 Wishard who got one complication or another of
13 their nicotine addiction, including bronchitis,
14 which is a very prominent one this time of year
15 that can lead to pneumonia, and as serious as
16 cancer and heart disease.

17 Q Have you had occasion to be involved in the
18 diagnosis and treatment of individuals who have
19 lung cancer?

20 A Yes.

21 Q Can you give us some idea of the frequency with
22 which you've become involved in the treatment
23 of individuals with lung cancer over the course

1 of your professional career?

2 A Lung cancer is a disease that requires a lot of
3 effort on the part of the physician and nurse
4 team. It can require a variety of different
5 forms of therapy from surgery to radiation to
6 chemotherapy. And as a result of those
7 therapies and as a result of the disease
8 itself, there can be a number of complications
9 of care, so you see those patients quite
10 frequently, unfortunately, in both the
11 emergency room and in the clinic setting. I've
12 had a number of patients who I've seen in both
13 settings who have lung cancer and/or some of
14 the complications associated with it. I've
15 seen patients in the I.C.U. with the same
16 problems.

17 I don't think there's any part of my
18 career, clinically or otherwise, that I have
19 not seen patients with complications of cancer
20 of the lung as a result of their nicotine
21 addiction.

22 Q In accordance with your training and your
23 actual work in the field of public health, have

1 you had an opportunity to deal with the
2 relationship between cigarette smoking and
3 health hazards?

4 A Yes.

5 Q Can you tell us your experiences in that
6 regard?

7 MR. WAGNER: Just a moment. I'm
8 going to object to this line of questioning,
9 your Honor, because I think that this witness
10 is going to testify now to matters that are
11 wholly foreign to any issues in this case,
12 namely, some relationship between public
13 health, as the question has posed to this
14 witness, and smoking. That's not an issue in
15 this case. This is not an opportunity for the
16 plaintiffs in this case to inject things that
17 will be prejudicial to the defense.

18 MR. HARDY: Your Honor, I'd like
19 to add that it is clearly beyond the scope of
20 the 26(b) designation which is restricted to
21 lung cancer specifically.

22 THE COURT: Could you provide me,
23 I don't know -- some of the witnesses through

1 the course of discovery, those 26(b)s got in
2 the file, most of them are not, so when you --
3 I'm limited to -- you've read them to me once
4 and I'm limited to try to remember what it was.
5 But if I could just see, please, a copy.

6 MR. HARDY: May I approach the
7 bench?

8 THE COURT: Sure, yes, please,
9 please.

10 MR. HARDY: Pages 11 and 12.

11 THE COURT: Let me ask counsel to
12 approach the bench, please.

13 (The following bench conference was held
14 outside of the hearing of the jurors.)

15 THE COURT: Help me understand
16 where -- the question is, if you can see, "Have
17 you had the opportunity to deal with the
18 relationship with cigarette smoking and health
19 hazards."

20 MR. MICHAEL HOLLAND: I can
21 withdraw it and make it specific to lung
22 cancer, that's fine.

23 THE COURT: Is that what you'll

1 do?

2 MR. MICHAEL HOLLAND: That's what

3 I will do.

4 MR. WAGNER: It is still

5 objectionable because what he's doing is

6 attempting to inject an issue in this case that

7 has to do with the relationship with either the

8 public health, which is on your Honor's screen,

9 and smoking or health hazards of smoking and

10 that sort of thing, get him to talk about that,

11 and that is totally improper and that's going

12 to be very prejudicial to the defendants in

13 this case.

14 I mean, it's clear that this is where this

15 line of testimony is going. And that question

16 is objectionable and any question like that

17 question is going to be objectionable, whether

18 it's tied to lung cancer causation or

19 addiction, and if it's tied into public health

20 concerns and that sort of thing, that's not an

21 issue in this case.

22 This is, first of all, a consumer

23 expectation state, has nothing at all to do

1 with this witness's views about smoking and
2 public health. Besides that, it's clearly
3 outside his 26(b) disclosure, he never
4 testified about this.

5 THE COURT: Well, are you going
6 to talk about the issue of lung cancer? And so
7 what you're saying, you're going to withdraw
8 this question and ask him one more about lung
9 cancer.

10 MR. MICHAEL HOLLAND: The
11 relationship between cigarette smoking and lung
12 cancer.

13 THE COURT: As a causal
14 connection between smoking?

15 MR. MICHAEL HOLLAND: Right.

16 THE COURT: Okay. Now, the issue
17 about public health, and it's a little blurry
18 sometimes because perhaps I haven't dealt with
19 that issue, and it's sort of the finite detail
20 here. But it seems to me if we're talking
21 about causation, it is an appropriate area.
22 And your concern is -- I just want to make sure
23 I understand your concern, the concern about

1 public health issues -- what kind of questions,
2 what kind of information would be prejudicial
3 are you talking about?

4 MR. WAGNER: It's precisely this,
5 Judge: This witness, as you've already heard,
6 has spent most of his career in some sort of a
7 public job, New York, Indiana health
8 commissioner, so forth and so on. He is now
9 administrator of health claims at Associated
10 Group.

11 What I anticipate this question and other
12 questions are going to lead to is his opinions
13 about how smoking impacts public health
14 matters, impacts insurance claims, impacts the
15 role of people that administer public health
16 and matters of that kind. That's what that
17 question is posited upon and it's clearly, one,
18 not an issue in this case; to talk about it is,
19 secondly, highly prejudicial to the defendants
20 in this case; and thirdly, it is clearly
21 outside his 26(b) disclosure.

22 THE COURT: I think it is talked
23 about but it isn't posited in those terms, the

1 harmful effect of cigarette smoking that
2 400,000 deaths a year, those are public health
3 statements. And I guess what you are saying is
4 that the context and how the questions and how
5 the issue is inserted in the trial is much
6 different.

7 It seems to me that when you say that --
8 other witnesses have testified that 400,000
9 people die every year as a result of smoking
10 and tobacco products, that's a public health
11 statement, but you're saying, and I guess
12 that's what I am trying to distinguish, we have
13 a lot of public health -- a lot of testimony
14 that obviously impacts upon the public health
15 in terms -- and I guess partly in dealing with
16 the harmful effects of smoking, but it's
17 tougher for me to see, I guess it's -- are you
18 saying it's the context in which it's raised?

19 MR. WAGNER: Absolutely.

20 THE COURT: Okay.

21 MR. WAGNER: Absolutely. I mean,
22 and --

23 THE COURT: I think I understand,

1 but I don't know whether I have a tremendously
2 firm grip on exactly what the position is, but
3 I think I see what you said to me just now. I
4 think what's going to happen, what you
5 suggested is to withdraw the question
6 concerning the issue of causal connection
7 between --

8 MR. MICHAEL HOLLAND: Between
9 lung cancer and cigarette smoking.

10 THE COURT: Let's try it from
11 there.

12 Dave, if there's a time maybe at the next
13 break if I could --

14 MR. HARDY: Get you a full copy.

15 THE COURT: Yes, it would be
16 helpful and less awkward.

17 (Conclusion of bench conference.)

18 MR. MICHAEL HOLLAND: We'll
19 withdraw the question and ask another question.

20 QUESTIONS BY MR. MICHAEL W. HOLLAND (Resumed):

21 Q Doctor, in the course of your training and your
22 position -- positions in the field of public
23 health, have you had an opportunity to consider

1 the relationship between cigarette smoking and
2 lung cancer?

3 A Yes.

4 Q Can you tell us your experiences in that
5 regard?

6 A Well, of course, in public health and in
7 medicine, it is very clear that the patients
8 who have lung cancer are patients who have a
9 huge problem with their cigarette smoking,
10 nicotine addiction.

11 From a public health standpoint, it serves
12 as the basis for all the programs that we put
13 in place --

14 MR. WAGNER: Your Honor, I don't
15 mean to interrupt the witness, and I apologize
16 for doing that. But we just had this
17 discussion at your Honor's bench about the
18 objectionable nature of this testimony.

19 And, secondly, there is no foundation laid
20 at all for this witness to testify as to any of
21 these matters. All he's described is his
22 positions holding government jobs and things of
23 that sort. This witness hasn't presented any

1 expertise in any area about the subjects that
2 he's now narrating about in answer to
3 Mr. Holland's questions.

4 THE COURT: Yes, and I think he's
5 responded to the question within the area that
6 we talked about. I'll sustain the objection.
7 Next question, please.

8 Q Doctor, as a professor of medicine, have you
9 had occasion to teach with respect to the
10 relationship between cigarette smoking and
11 health risks?

12 A Yes.

13 Q Do you have, Doctor, experience in the field of
14 epidemiology?

15 A Yes.

16 Q And what is epidemiology?

17 A Epidemiology is the science that allows those
18 involved in it to look for relationships
19 between variables within a population and
20 disease, correlation with those variables in
21 certain types of disease, such as correlations
22 of cigarette smoking with cancer and heart
23 disease as an example.

1 Q In your field and positions in the field of
2 public health, have you had occasion to apply
3 principles of epidemiology to health issues?

4 A Yes.

5 Q Have you had occasion to apply your knowledge
6 and expertise in the area of epidemiology to
7 questions of cigarette smoking and health
8 hazards?

9 A Yes.

10 Q Can you tell us from that standpoint whether,
11 in your opinion, there is a relationship
12 between cigarette smoking and lung cancer?

13 A There is a strong relationship between
14 cigarette smoking and lung cancer.

15 Q On the basis of your education, training and
16 experience, Doctor, do you have an opinion as
17 to whether cigarette smoking is a cause of lung
18 cancer?

19 A Yes, I do.

20 Q What is that opinion?

21 MR. WAGNER: Just a minute. I'm
22 going to object to that, your Honor, for the
23 reason that it is one thing for the witness to

1 talk about associations and another thing for
2 the witness to talk about a cause, there has
3 been no foundation laid for this witness to
4 express an opinion with respect to that
5 particular question.

6 THE COURT: The foundation has
7 been laid, I think, a wide breadth of
8 experience for this witness. I am concerned
9 about the basis, also, whether it's sufficient
10 to support this particular opinion. And I just
11 don't think the record supports it, at least at
12 this stage in the record. I'll sustain the
13 objection.

14 Q Doctor, in your education, training and
15 experience, what factors do you consider in
16 determining whether there is a causal
17 connection between cigarette smoking and lung
18 cancer?

19 A Well, there are a number of factors that one
20 has to look at in order to -- to make such a
21 judgment. Of course, you're relying upon the
22 medical literature, you're relying upon the
23 role and opinions of your colleagues, you're

1 relying upon your own clinical experience in
2 seeing patients.

3 I think that in looking at such
4 relationships, you want to look at the data
5 with respect to the strength of the
6 association, the time interval between the
7 cause and the effect that you're looking at.
8 You want to look at whether the association is
9 very specific or not specific. You want to
10 look at whether or not the different aspects
11 stick together, whether they're coherent as you
12 ponder -- as you move through the evidence.

13 I guess what you do is synthesize all
14 those various aspects together and you come up
15 with a decision in your own mind as to whether
16 there is a cause. It is a clinical judgment in
17 many cases. And my clinical judgment is very
18 clear in this case that cigarette smoking is a
19 cause of lung cancer.

20 Q Doctor, what has been your clinical experience
21 with respect to the occurrence of primary lung
22 cancer in individuals who do not smoke?

23 A I've seen a number of patients with lung

1 cancer, primary lung cancer, and I have never
2 seen a patient with primary lung cancer who did
3 not have a significant smoking history.

4 Q Doctor, is your opinion concerning the
5 relationship between cigarette smoking as a
6 cause of lung cancer consistent in your opinion
7 with the consensus of the medical and
8 scientific community?

9 A Oh, yes.

10 Q In your opinion, is there any authoritative,
11 reliable or respected opinion to the contrary?

12 A There is not.

13 Q Doctor, have you had experience in becoming
14 involved in the treatment of individuals who
15 are trying to stop smoking?

16 A Yes.

17 Q Can you tell us about your experiences there?

18 A Ever since medical school and you start seeing
19 patients in the clinic, you're taught to focus
20 not just on the disease or diseases that the
21 smoking causes, but you're also taught to do
22 what you can to intercede such that that
23 doesn't get worse.

1 And in all the teaching that I do today,
2 that's the major principle, not just to go
3 after the bronchitis or cancer or whatever
4 you're worried about, but to try to stop the
5 cause.

6 It's very, very difficult for many
7 patients to stop their smoking. The data that
8 I am aware of suggests that over a third of
9 people who smoke cigarettes every year try to
10 stop and can't do it because of the nicotine
11 addiction.

12 There are many different theories on the
13 best way to stop smoking. Some people believe
14 that you augment the nicotine addiction from
15 cigarettes with something like a nicotine gum
16 or patches and then you decrease their use over
17 time.

18 Other experts believe that the best way to
19 do it is in an educational classroom type
20 setting.

21 Some people believe that hypnosis works.
22 In some cases it clearly has had a positive
23 effect.

1 Others of us suspect that the best way to
2 do it is to stop what some people refer to as
3 cold turkey, just to have the patient set a
4 date and a time for their last cigarette and
5 have that and then never have another one
6 again.

7 My advice to patients, as we review all
8 their options, is to pick one of them and do
9 it. It doesn't really matter as the physician
10 which one they choose as long as they choose
11 one and they can be successful.

12 I've had particular luck when you focus on
13 the Great American Smoke-out Days that have
14 been sponsored I think by American Lung
15 Association where everybody is supposed to take
16 a day off from smoking and then see if they can
17 keep that going. Sometimes there's a lot of
18 peer pressure in the workplace, people
19 encouraging somebody to do it. I think they
20 get support, positive support and reinforcement
21 so that they take advantage of that.

22 The fact is is that this drug nicotine is
23 very, very difficult for patients to control.

1 And a large number of patients can't, and find
2 it exceptionally hard to do so. All the
3 methods that I have talked about have some
4 usefulness for some patients at some point in
5 their life and hopefully they can find one that
6 works for them.

7 The point is, as a physician, you keep
8 encouraging them to try. If one doesn't work,
9 you try another one, and you keep pushing them
10 to not give up on the idea of quitting, because
11 sooner or later one of the methods that they
12 choose can and will work for them. At least
13 that's what you want them to believe, and
14 believing that is the case, is I think an
15 important adjunct to stopping their addiction.

16 Q Doctor, on the basis of your education,
17 training and experience, do you have an opinion
18 which you can state to a reasonable degree of
19 medical certainty whether nicotine and
20 cigarette smoking -- cigarette smoke is
21 addicting?

22 A Yes.

23 Q What is your opinion?

1 A I believe very strongly that it is addicting.

2 Q What is it about the cigarette that is

3 addictive?

4 A What a lot of us believe is that the cigarette

5 is really a drug delivery system for nicotine.

6 The nicotine is packaged in a cigarette. By

7 lighting the cigarette with your fire, and by

8 inhaling, the design is such that you get that

9 nicotine into your mouth and into your trachea

10 and then into your lungs, where it's absorbed

11 into the bloodstream. And studies have shown

12 clearly that it's absorbed fairly rapidly.

13 Within a minute to three minutes people get a

14 rise in their blood nicotine levels from

15 inhaling cigarette smoke.

16 That nicotine then has a number of

17 physiologic effects on the patient. First of

18 all, it affects the chemical receptors in the

19 brain. Studies have shown that the EEGs,

20 electroencephalographs, of patients can be

21 altered as a result of nicotine. It increases

22 the heart rate. It increases the amount of

23 blood flow centrally and decreases the blood

1 flow peripherally, and one of the ways you
2 measure that is looking at skin temperature.
3 Skin temperature can go down when you're
4 smoking cigarettes. Your heart pounds a little
5 harder. Some patients use that sensation and
6 interpret it as being more alert.

7 Nicotine has been shown to increase the
8 blood sugar, making more sugar available to the
9 cells in the body, so that people get sometimes
10 a sensation of more energy when they smoke as
11 well.

12 All these physiologic effects are positive
13 reinforcement for having smoked the cigarette.
14 And what happens is that the patient smokes,
15 gets those positive reinforcement, physiologic
16 kind of steps, cigarette goes away, the
17 nicotine level goes down, the reinforcement
18 goes down, the patient wants it again. So the
19 patient lights up the next cigarette.

20 It's not the first cigarette that you
21 smoke that addicts you, it's the second, third,
22 fourth and fifth and so on that addicts you.
23 And for a lot of patients, once they get in

1 that cycle, that's it, especially for
2 teenagers, which is where most patients who get
3 addicted to cigarettes and to nicotine, that's
4 the time period where that addiction starts.

5 That is why it's so important for programs
6 to be in place to keep teenagers from ever
7 starting, because if you can get somebody past
8 the age of 19 or 20 without ever having touched
9 a cigarette, you've got a really good chance
10 that, as an adult, they won't. But it's that
11 peer pressure, it's that wanting to be like the
12 older kids, or wanting to be like dad or mom or
13 whatever that teenagers go through that make
14 them especially vulnerable to habits like
15 starting to light up and then the addiction
16 that results.

17 I don't know if I've answered your
18 question or not, Counselor, but that's my
19 opinion as to what happens.

20 Q Yes, thank you, you have.

21 Doctor, in your clinical experience, have
22 you had occasion to see patients who have been
23 diagnosed with cancer, yet continue to smoke?

1 A Oh, yes. Absolutely.

2 Q Could you tell us your experiences in that
3 respect?

4 A Oh, there have been many patients, they'll come
5 in, and some patients, especially with head and
6 neck cancer, they can't use their mouths any
7 more to swallow because the cancer has eaten
8 away parts of their esophagus or pushing in on
9 their trachea, and they'll have sometimes a
10 tracheostomy, which is an insertion in the
11 trachea, where they have a little tube in
12 helping them to breathe. I have seen patients
13 on many occasions put the cigarette into the
14 trachea, into the tracheostomy, and inhale to
15 get the nicotine. It's just absolutely amazing
16 that patients would do that.

17 I've seen patients who are on their -- who
18 wouldn't come to the hospital for their
19 chemotherapy because the hospitals a few years
20 ago started making the wards nonsmoking. So
21 they would choose to not get their
22 chemotherapy, or you had to fight with them,
23 and their family would help you, to get them to

1 come in to get their chemo by convincing them,
2 look, you don't need to smoke during the period
3 of time you get your chemotherapy in the
4 hospital, because the hospitals, of course,
5 almost all of them went nonsmoking.

6 You'll see patients that are coming in for
7 bronchitis or pneumonia; in fact, I saw a
8 patient last Friday who had bad bronchitis,
9 also had some coronary artery disease, and a
10 lot of times because you get close to people
11 when you're examining them, you can smell the
12 cigarette smoke, the tobacco on them. I looked
13 at him, he had this big pack of cigarettes in
14 his pocket, I was with one of the interns and,
15 of course, we wanted to make a big deal out of
16 it. We pulled them out of his pocket, asked
17 what would he rather have, the Kools or the
18 prescription for the bronchitis? Because they
19 couldn't work both together. And fortunately,
20 in that case, he allowed us to throw them in
21 the trash and we hopefully convinced him that
22 was the last time he ever should smoke a pack
23 of Kool cigarettes.

1 So, no, it is very clear that this
2 addiction is incredibly tough for people to
3 stop. Even when they know they are dying of
4 lung cancer and other diseases, the addiction
5 is so powerful that they continue, many of
6 them, to smoke. That's why this is such a
7 terrible problem for us in medicine.

8 Q Doctor, in your opinion, is there a consensus
9 in the medical and scientific community with
10 respect to whether cigarette smoking is
11 addictive?

12 A Oh, yes, it's addictive.

13 MR. MICHAEL HOLLAND: Thank you,
14 Doctor.

15 THE COURT: Cross exam?

16 MR. WAGNER: Yes, thank you, your
17 Honor.

18 CROSS-EXAMINATION,

19 QUESTIONS BY MR. RICHARD D. WAGNER:

20 Q Dr. Myers, my name is Richard Wagner. I'm one
21 of the attorneys in this case for the R.J.
22 Reynolds Tobacco Company.

23 Dr. Myers, it's correct, isn't it, that

1 most of your career has been spent in
2 activities other than the clinical practice of
3 medicine; would that be a fair statement,
4 Doctor?

5 A I would not characterize my career that way,
6 Counselor.

7 Q Would you say more than 50 percent of your
8 career has involved you with things other than
9 the clinical practice of medicine?

10 A I guess it would depend on how one defines
11 clinical practice of medicine. In my
12 activities that are not directly with an
13 individual patient, I would still consider
14 those, many of them, clinical because they
15 relate to the disease processes of those
16 patients.

17 If your question specifically is whether
18 or not more than 50 percent of my career is
19 spent at the bedside in the I.C.U. or in the
20 clinic or emergency room with a patient, it is
21 not.

22 Q Doctor, you were deposed in this case, were you
23 not, on October the 4th, 1994, a little over

1 three months ago?

2 A Yes.

3 Q At the time of your deposition, of course, you

4 were sworn to testify to the truth under oath;

5 is that correct?

6 A Yes.

7 Q Let me ask you, sir, if you recall being asked

8 this question and giving this answer on page 66

9 of your deposition: "Would you agree with me

10 that reviewing your career as a whole to this

11 point, you have devoted the majority of your

12 time to public service, teaching health care

13 management and other activities as opposed to

14 actually the clinical practice of medicine?"

15 And you answered that, "By majority, you

16 mean greater than 50 percent over the course of

17 14 years, the answer is yes."

18 A Depending on the definition of clinical

19 medicine that you would choose in the context

20 of that.

21 Q Isn't that the same question I just asked you,

22 Doctor?

23 A Depending upon the clinical definition that you

1 would choose, that question could be

2 interpreted as the same.

3 Q Doesn't the clinical practice of medicine mean
4 seeing patients?

5 A Not necessarily.

6 Q Not to you. Is it true, Doctor, that you never
7 had your own private medical practice?

8 A Depends on how you want to define private
9 medical practice, Counselor. If you mean by
10 that where I have been in the solo practice of
11 medicine as a full-time occupation, the answer
12 is no. If you mean have I had private patients
13 that came to see me and there was reimbursement
14 made to the hospital or to the environment in
15 which I was practicing, the answer is yes.

16 Q You've never, as lawyers say, hung out your
17 shingle and had an office with employees and
18 people in the private practice of medicine come
19 to see you as they would a family --

20 A I've have a shingle out, Doctor -- or
21 Counselor, where --

22 Q Pardon me?

23 A I have a shingle out, if the shingle means the

1 name on the door, but I have never been in a
2 situation where that was the primary business
3 that I was engaged in exclusively.

4 Q In fact, you never at any time in your career
5 have been engaged full time exclusively in
6 treating patients; isn't that correct?

7 A That is correct.

8 Q Now, as I understand it, Doctor, you graduated
9 from medical school in about 1977?

10 A June of '77 is correct.

11 Q And that would have been about 18 years ago; is
12 that correct?

13 A Yes.

14 Q During the last four years of those 18 years,
15 as I understand it, you've been, since 1991 to
16 the present time, with The Associated Group?

17 A That's true.

18 Q Is that correct?

19 A That is correct.

20 Q In fact, your office is on Monument Circle?

21 A Yes, it is.

22 Q And The Associated Group sells medical
23 insurance?

1 A Some of the subsidiaries in The Associated

2 Group offer medical insurance, yes.

3 Q As I understand it, part of your job there is

4 to oversee medical insurance claims?

5 A Not at the present time, Counselor.

6 Q Was that true when your deposition was taken,

7 Doctor --

8 A Well --

9 Q -- three months ago?

10 A It depends upon what you mean by oversee,

11 Counselor. If you want to define oversee as

12 being the actual looking at of individual

13 claims and managing the decision-making process

14 for those claims, I no longer manage that on a

15 full-time basis. That's managed by others.

16 I have a role to play as needed, but since

17 the creation of the newest subsidiary of The

18 Associated Group, Athena of North America,

19 which had its debut in January, I've done much

20 less oversight and much more with medical

21 information and clinical systems.

22 Q Did you have responsibilities at The Associated

23 Group in October of 1994 when your deposition

1 was taken for the oversight of medical

2 insurance claims?

3 A I had some responsibilities along those lines,

4 yes, sir.

5 Q All right, sir. And that's what you testified

6 to in your deposition a little over three

7 months ago, right?

8 A Yes.

9 Q Now, well, from approximately the last four

10 years you've been at The Associated Group, and

11 I believe you've testified that you also put in

12 some time at the Wishard Hospital here in

13 Indianapolis; is that right?

14 A Yes.

15 Q And you do that about twice a month, right?

16 A Two to three times a month, yes.

17 Q I think you testified in your deposition on the

18 average about twice a month; is that correct?

19 A Yes.

20 Q And the twice a month that you're at the

21 emergency room in Wishard Hospital represents a

22 stint that you do from about 5 p.m. to 11:30

23 p.m., right?

- 1 A That's correct.
- 2 Q Which is about six and a half hours?
- 3 A That's about right.
- 4 Q And Wishard Hospital's emergency room treats a
- 5 lot of trauma patients?
- 6 A It does.
- 7 Q People who are involved in car accidents,
- 8 gunshot wounds and that sort of thing?
- 9 A Yes, it does.
- 10 Q And then another two of these approximately 18
- 11 years since you've got out of medical school, I
- 12 believe, were spent as the Commissioner of
- 13 Health in New York City; is that right?
- 14 A That's correct.
- 15 Q And that was a full-time job?
- 16 A Yes, it was.
- 17 Q From 1990 to 1991?
- 18 A Yes.
- 19 Q And at that time and during those years, you
- 20 were not actively involved in the practice of
- 21 medicine, right?
- 22 A Not actively, no, sir.
- 23 Q And then for five or six of these 18 years

1 since you've been out of medical school, you
2 were the Health Commissioner of the State of
3 Indiana; isn't that right?

4 A Yes.

5 Q That was from 1985 to 1990?

6 A Yes.

7 Q That was also a full-time job?

8 A Yes.

9 Q And for a few months in the last part of 1984,
10 you were an adviser to a United States Senate
11 committee in Washington, D.C.?

12 A Yes.

13 Q And you described your experience at the San
14 Francisco General Hospital, and that occurred
15 in 1982 to 1984, approximately; would that be
16 correct?

17 A Yes.

18 Q And actually, when you were at the San
19 Francisco General Hospital, you worked in
20 I.C.U. or the intensive care unit; is that
21 correct?

22 A That was one of the places I worked, yes.

23 Q And you saw in the I.C.U. or intensive care

1 unit surgical or trauma-related patients?

2 A We saw a huge variety of patients. It was the
3 medical/surgical I.C.U., so we saw both
4 patients that had complications of medical
5 illness and those patients that had some kind
6 of problem with surgical illness.

7 Q And a large part of your time in that job from
8 1982 to 1984, you were responsible for
9 administrative matters, right?

10 A About 50 percent of my responsibility was
11 administrative, 50 percent was clinical during
12 that two and a half years.

13 Q All right. And then about two more of those 18
14 years since you've graduated from medical
15 school, you were in the Stanford School of
16 Graduate Business; isn't that correct?

17 A Yes, I was.

18 Q You pursued a master's degree in business
19 administration there?

20 A Uh-huh -- yes.

21 Q In fact, that would have started about three
22 years after you graduated from medical school,
23 right?

1 A A little over three years. However, I was very
2 clinically active during that period of time,
3 Counselor.

4 Q Well, I think you described the clinically
5 active activities, as you just put it, as
6 sidelights to your pursuit of a business degree
7 from the Stanford Business School; isn't that
8 correct?

9 A It's exactly the opposite, Counselor. The
10 business school was a sidelight to my interest
11 in clinical medicine. In fact, I went to
12 business school because I wanted to augment
13 what we were able to do at the bedside.

14 Unfortunately, treating patients one at a
15 time in the I.C.U. or in the clinic, for me,
16 did not represent what I thought would be the
17 maximum contribution I could make, so I wanted
18 to find other ways to treat more patients than
19 just the one that was at the bedside, and the
20 business school experience and health policy
21 experience allowed me to be able to do that.
22 So I saw it in the opposite way that you
23 described it.

1 Q Well, it's a fact, isn't it, Doctor, that the
2 setting in which you provided any medical care
3 to patients in the last several years has
4 predominantly been in the emergency room in
5 hospitals; is that a correct statement?

6 A In the last several years, yes, that's correct.
7 But, Counselor, you, I'm sure, realize that
8 over 80 percent of the patients that come to
9 the emergency room are not true medical
10 emergencies --

11 Q Now, you're aware --

12 A And they are, in fact, patients that have --

13 Q Excuse me, Doctor, you answered the question.

14 A I thought that you asked me to answer the
15 question. I was trying to answer it for you.

16 Q Doctor, is it correct, then, that you're a
17 former smoker?

18 A Yes, it is.

19 Q And you smoked when you were in college?

20 A Yes.

21 Q And I believe you stopped smoking while you
22 were in medical school; correct?

23 A That is correct.

1 Q And you stopped smoking while you were in
2 medical school because of health reasons, your
3 concerns about the health consequences of
4 smoking?

5 A Yes.

6 Q And then again when you were in your internship
7 and your residency, you smoked?

8 A Very little, but yes, I did.

9 Q The reason that you smoked when you were in
10 your internship and your residency was because
11 there would be long periods of time when you
12 would go without rest and you smoked in order
13 to keep awake and alert?

14 A I, unfortunately, chose to drink a lot of
15 coffee and smoke cigarettes during those nights
16 when I had to stay up, yes.

17 Q And, again, you stopped when you finished your
18 residency because of your concern about the
19 health consequences of smoking; correct?

20 A That is correct.

21 Q And then you took up smoking again in 1985;
22 correct?

23 A That is correct.

1 Q And you took it up at that time because you

2 were on a diet?

3 A That is correct.

4 Q And you had a fairly severe diminution of your

5 caloric intake?

6 A That's correct.

7 Q You smoked because smoking took your mind off

8 of the diet.

9 A No, that's not correct.

10 Q Well, Doctor, didn't you testify to that in

11 your deposition?

12 A I don't remember the exact words. I would

13 choose another way to describe it, however. I

14 may have said those words if that's what's in

15 the transcript. I don't deny it, but the --

16 Q All right, sir. I believe you smoked, then,

17 from 1985 to 1988 when after the time that you

18 took up smoking because of the diet; right?

19 A I would average a couple cigarettes a week,

20 yes.

21 Q All right. And in fact, that smoking episode

22 in your life, Doctor, was when you were the

23 Health Commissioner of the State of Indiana; is

1 that right?

2 A That is correct.

3 Q And then when you went to New York you were
4 still smoking and you finally quit entirely in
5 1992; right?

6 A That is correct.

7 Q And all of these quits that you experienced,
8 you did all those on your own without any help
9 from anybody or any kind of assistance; is that
10 correct?

11 A Yes.

12 Q Now, Doctor, it's a fact, isn't it -- I want to
13 ask you some questions about some of the
14 opinions that you have expressed here this
15 morning. It's a fact, isn't it, Doctor, that
16 you've only, I think as you've put it, skimmed
17 the 1964 Surgeon General's Report?

18 A I've read the report.

19 Q Didn't you describe it as having skimmed the
20 report in your deposition?

21 A I may have chosen those words in the
22 deposition, yes.

23 Q Was that, when you told us that in your

- 1 deposition, was that accurate, that you had
2 only skimmed it?
- 3 A That's accurate, I had skimmed it right before
4 I had came into the deposition.
- 5 Q Doctor --
- 6 A I had also believe at the deposition suggested
7 to you that I had read it prior to that point
8 of time as health commissioner, and I have read
9 it subsequent to that point of time.
- 10 Q You've read it since October of 1994?
- 11 A Oh, yeah.
- 12 Q Did you read that because someone told you to?
- 13 A I read it in order to optimize my preparation
14 for being here with you, Counselor.
- 15 Q We thank you for that. It's a fact, isn't it,
16 Doctor, that you have never read the entire
17 1988 Surgeon General's Report.
- 18 A '88 or '64?
- 19 Q 1988.
- 20 A I have looked through the entire report, yes,
21 Counselor.
- 22 Q Have you read it?
- 23 A If you asked me did I read every word, probably

1 not, but I've touched every page and looked at
2 every page.

3 Q Doctor, it's a fact, isn't it, that you do not
4 know what the criteria were that the 1964
5 Surgeon General's Report used to define
6 addiction?

7 A The 1964 Surgeon General's Report, in my
8 opinion, did not adequately define addiction
9 with respect to nicotine. They corrected that,
10 of course, later on. In fact, the World Health
11 Organization corrected that later that year, if
12 I remember correctly.

13 Q Doctor, I apologize to you. I probably didn't
14 ask a very clear question. My question,
15 Doctor, was: It's a fact, isn't it, that you
16 do not know what the criteria were that the
17 1964 Surgeon General's Report used to define
18 addiction.

19 A I believe I could talk about addiction as it
20 was represented in the '64 --

21 Q Are you telling us here today that you know how
22 the 1964 Surgeon General's Report defined
23 addiction?

1 A The Surgeon General's Report in '64 made a
2 distinction, Counselor, between addiction and
3 habituation. And they thought of drugs, such
4 as the opiates, as being addicting, where they
5 looked at tobacco and nicotine as being
6 habituation or habit-forming drugs.

7 The distinction that they made was
8 primarily based upon whether or not there was
9 some overall effect to society, and they felt
10 at that time that -- or at least in that
11 report, that the addicting drugs had an effect
12 on society where the habituating drugs did not.

13 Clearly, that was, in my opinion, a
14 semantic distinction that shouldn't have been
15 made. In fact, as I suggested earlier, it was
16 corrected. Is that what you are asking me
17 about, Counselor?

18 Q I thought I asked you the question as to
19 whether or not you knew what the criteria were
20 that were used in the 1964 Surgeon General's
21 Report to define addiction.

22 A I think I just answered you.

23 Q Do you know what those criteria were?

1 A I just answered you. The addiction criteria
2 were based upon whether or not the product in
3 question, in addition to the physiologic
4 effects that it had on the patient, had an
5 overall effect on society.

6 Q Doctor, it's accurate that you didn't know the
7 answer to that question in October of 1994 when
8 you were asked at your deposition.

9 A I can't specify what I said at the deposition.

10 Q Well --

11 A If you want to read it to me.

12 Q Perhaps I can remind you.

13 You were asked this question and you gave
14 this answer at page 130: "Do you know what the
15 criteria were that the 1964 report used to
16 define an addiction? Answer: I can't recall
17 it specifically, no."

18 Was that a truthful answer that you gave
19 at that time, Doctor?

20 A I think, however -- the answer to your question
21 is yes, that was truthful at the time. But if
22 you look in the deposition, we talked a great
23 deal, I remember very specifically, about these

1 questions in the '64 report.

2 Q Doctor, it's a fact, isn't it, that you
3 personally have never conducted or contributed
4 to a study on the alleged addictive nature of
5 cigarette smoking?

6 A That is correct.

7 Q And you're not a psychiatrist?

8 A I do not hold myself out to be a psychiatrist.

9 Q And you don't hold yourself out as an expert in
10 substance abuse treatment, do you?

11 A I hold myself out as an expert in aspects of
12 substance abuse treatment, yes, but I don't
13 advertise myself in the medical community as
14 someone to refer those kinds of patients to,
15 no.

16 Q The answer to my question is: You do not hold
17 yourself out as an expert in substance abuse;
18 is that correct?

19 A To the members of the medical community, that
20 is correct. However, to my patients I am their
21 expert in substance abuse.

22 Q Would you agree with me, Doctor, that the
23 definition of pharmacology is the science of

- 1 dealing with the preparation, uses and
2 especially the effects of drugs? Is that a
3 working definition you and I can agree on?
- 4 A When you say drugs, I would assume you mean
5 legal drugs? Yes.
- 6 Q Okay. And the term psychopharmacology would be
7 a term that refers to the effects of drugs on
8 our mental state; would you agree with that?
- 9 A Yes.
- 10 Q And, Doctor, it's true, isn't it, that you have
11 no expertise in psychopharmacology.
- 12 A Well, again, Counselor, I don't know whether
13 we're splitting hairs or not, but when you say
14 expertise, I clearly know much more about it
15 than the lay person. There are people in the
16 scientific community that know much more about
17 it than I do. So you'll have to give me a
18 little bit of help on what your definition of
19 expertise happens to be.
- 20 Q You were asked this question in your deposition
21 and you gave this answer, Doctor, at page 118:
22 "Do you have any expertise in the field of
23 psychopharmacology? Answer: I am familiar

1 with issues within psychopharmacology.

2 However, I would not suggest that I have

3 expertise in that particular area."

4 Do you remember giving that answer to that
5 question?

6 A Yes.

7 Q Was that answer true?

8 A Yes.

9 Q Is it true today?

10 A Given the caveat that I just outlined, yes.

11 Q Now, you've never done any original research on
12 smoking; isn't that correct?

13 A Yes.

14 Q It's a fact that you have never done any
15 original research on smoking behavior.

16 A That is correct.

17 Q And it's a fact, isn't it, that you're not an
18 expert in determining the psychoactive effects
19 of various drugs.

20 A That is correct.

21 Q Would you agree, Doctor, that the Diagnostic
22 and Statistical Manual is an authoritative
23 manual for the diagnosis of psychiatric

1 disorders?

2 A It's an authoritative manual for the
3 classification of diagnosis, but the manual
4 doesn't diagnose anybody.

5 Q Again, maybe my question wasn't quite clear.

6 You agree, do you not, Doctor, that the
7 Diagnostic and Statistical Manual is an
8 authoritative manual for the diagnosis of
9 psychiatric disorders?

10 A When you say for the diagnosis, Counselor, I'm
11 assuming you mean for those individuals who
12 have expertise in diagnosis as a reference
13 book. If that is what you mean, the answer is
14 yes.

15 Q All right, sir. And you have never read the
16 section on nicotine dependence in the
17 Diagnostic and Statistical Manual III-R, have
18 you?

19 A No.

20 Q And, in fact, I believe you testified at your
21 deposition you had only skimmed the section on
22 nicotine dependence in DSM-IV; right?

23 A Correct.

1 Q As a matter of fact, you received an excerpt of
2 that particular version of the DSM from
3 plaintiff's counsel; is that correct?

4 A That's correct.

5 Q Doctor, the word or term psychoactive has
6 sometimes been used, maybe during your
7 testimony, I can't quite remember actually.
8 But that term, you agree with me, means
9 something that has a significant effect on our
10 mental state.

11 A That's a fair definition.

12 Q And, Doctor, it's a fact, isn't it, that many
13 common experiences and activities produce some
14 of the same physiological and psychoactive
15 effects that are produced by smoking a
16 cigarette?

17 A I believe there's a distinction that I would
18 make, Counselor, depending upon the physiologic
19 effects of whatever it is that you're using as
20 an example. All psychoactive effects are
21 chemically mediated. There is no effect that I
22 can think of that is not in some way mediated
23 by receptors in the brain and their stimulus or

1 their deactivation in some way. If whatever
2 you have in mind follows that same pattern,
3 then perhaps you are correct.

4 Q Did you say perhaps I am correct?

5 A Depends on that example that you might want to
6 give.

7 Q Well, some examples would be excitement,
8 exercise, and sex; isn't that correct?

9 A Because those -- exercise and sex have been
10 shown to increase endorphin release in the
11 brain. There are receptors that, when the
12 endorphin attaches, are activated and those
13 activated receptors cause the individual to
14 feel what is interpreted as a pleasurable
15 sensation; correct.

16 Q So the answer to the question I originally
17 asked you would be yes; right?

18 A With respect to exercise and sex, yes.

19 Q Those are common experiences, are they not? Or
20 at least some of us hope so.

21 A We would hope so, yes.

22 Q And, in fact, Doctor, caffeine can produce
23 psychoactive effects; isn't that correct?

1 A Caffeine can produce psychoactive effects, yes.

2 Q And, in fact, caffeine can produce a stimulated

3 state which is one reason people enjoy

4 caffeine; isn't that correct?

5 A It's one reason why people use caffeine. Enjoy

6 is a different word.

7 Q In fact, Doctor --I'm sorry, did I interrupt

8 your answer? I apologize.

9 A Caffeine use is, I think, an area where the

10 word enjoy, I think in many respects, doesn't

11 apply to the actual caffeine but applies to the

12 taste of the tea or the cola or the coffee or

13 whatever it is that's producing the caffeine.

14 I'm not sure that you can say people that take

15 caffeine pills in order to stay up at night,

16 that they enjoy it. But it does produce

17 psychoactive effects.

18 Q Well, you were asked this question, Doctor, at

19 page 163 of your deposition: "Would you

20 describe the pharmacological and psychoactive

21 effects of caffeine." You answered: "The

22 caffeine in many patients and the other

23 methylxanthines" -- am I producing that

1 correctly?

2 A Xanthines.

3 Q All right. -- "tend to produce a stimulated

4 state which is partially the reason people

5 enjoy using those." Wasn't that your words?

6 A Yes, and emphasis on the word partially. And I

7 was explaining the other side of that in my

8 answer with respect to taste, Counselor.

9 Q But people at least partially enjoy that

10 stimulated state; right?

11 A Yes.

12 Q In fact, Doctor, in your opinion, coffee can

13 produce the same feelings of heightened

14 awareness that people may experience when using

15 tobacco?

16 A It's a similar feeling in some patients, yes.

17 Q And it's your opinion, isn't it, Doctor, that

18 caffeine has addictive characteristics?

19 A No, that's not how I would characterize it. I

20 would suggest to you that caffeine certainly

21 has physiologic responses, but that those

22 responses are not in the same category as

23 addiction than -- compared to tobacco or to

1 opium or to any other substance.

2 A lot of the patients, for instance,
3 Counselor, can use decaf teas or decaf coffee
4 or decaf cola and gain satisfaction from it. I
5 don't know of anybody that uses a denicotized
6 cigarette. In fact, they need the nicotine in
7 order to get the effects of the enjoyment. So
8 I wouldn't characterize it as the same.

9 Q Doctor, do you recall giving this answer to a
10 question about caffeine at page 166 of your
11 deposition? You said, "I don't think it,
12 caffeine -- let me rephrase. Caffeine has
13 addictive characteristics." Do you remember
14 saying that?

15 A There are some characteristics that have --
16 that are similar, but it is not the same as
17 nicotine, no.

18 Q Well, Doctor, I didn't ask you about whether or
19 not it is the same as nicotine. I asked you
20 whether or not in your opinion it had addictive
21 characteristics and the answer to that question
22 is, in your opinion, yes; right?

23 A There are some characteristics that are

1 similar, yes.

2 Q And you said in relationship to caffeine at
3 page 166, "It's addictive in the sense that
4 many patients use it, use it regularly with
5 difficulty in controlling their use of it."

6 Do you remember making that statement?

7 A Yes.

8 MR. MICHAEL HOLLAND: Excuse me,
9 I'm going to object that he's quoting from the
10 deposition, but the doctor does not have the
11 deposition before him, and he's taking pieces
12 of testimony that are part of a complete
13 answer. So that's my objection. I don't think
14 there's a proper foundation being laid for
15 cross-examining the doctor from his deposition.

16 MR. WAGNER: Let me say, first of
17 all, I am laying a proper foundation because
18 the doctor -- I'm asking the doctor a question,
19 he gives me a different answer than his
20 deposition. I've asked him if he made this
21 answer to this question in his deposition. I
22 don't know what further foundation I could lay.

23 And in response to Mr. Holland's inquiry

1 about letting the doctor read a copy of the
2 deposition, I have another copy. If he would
3 like to read it himself, he certainly may.

4 THE COURT: All right, thank you.

5 Q Doctor, it's your opinion, isn't it, Doctor,
6 talking about the things that you said
7 generally here this morning about addiction,
8 that you don't believe that gambling can be
9 addictive; isn't that correct?

10 A That's correct.

11 Q You don't believe that food can be addicting?

12 A I do not believe that food can be addicting,
13 no.

14 Q You don't really have any opinion as to whether
15 or not people can be addicted to exercise;
16 isn't that right?

17 A I think there's interesting research going on
18 in that area that leads me to believe that
19 there may be a chemical tie from the release of
20 endorphins. In fact, some people describe that
21 as the runner's high. People that jog
22 frequently have probably an enhanced sense of
23 themselves that probably is chemically mediated

1 from endorphin release similar to orgasm in
2 sex, but the research on that isn't complete.

3 Q Doctor, you do know, do you not, that the 1964
4 Surgeon General's Report defined cigarette
5 smoking as a habit and not an addiction?

6 A That is correct.

7 Q And it's your opinion, isn't it, Doctor, that
8 all regular smokers do not lack voluntary
9 control over their smoking?

10 A That is correct.

11 Q It's also your opinion, isn't it, Doctor, that
12 not all regular smokers are addicted to
13 cigarettes or to nicotine?

14 A That is correct.

15 Q And it's your opinion, Doctor, that just
16 because someone smokes when they've been
17 advised to quit, that doesn't mean they are, in
18 fact, addicted.

19 A It is highly consistent with addiction, but it
20 does not invariably mean that they are
21 addicted.

22 Q Okay. And in fact, Doctor, in your experience
23 in the medical practice, it's common for

1 patients not to follow their doctor's advice
2 about many matters; isn't that true?
3 A It's much more common for them not to follow
4 advice about tobacco because of the addictive
5 nature of that substance. It's much more
6 common, although not a hundred percent, that
7 they'll follow advice in other areas like
8 taking their blood pressure medication.

9 MR. WAGNER: Move to strike the
10 non-responsive answer, your Honor.

11 THE COURT: I think it was
12 responsive.

13 MR. WAGNER: The question, your
14 Honor, was it's common for patients not to
15 follow their doctor's advice. I didn't ask the
16 doctor about the subjects that he would like to
17 testify about, I asked him about the subject
18 that I wanted him to testify about.

19 THE COURT: Well, I think he was
20 drawing a contrast in explaining his answer. I
21 think it's an appropriate response.

22 While you're taking a deep breath there,
23 let's take a deep breath as well. Let's take a

1 mid-morning recess. With that, the jury may
2 rise and be in recess about 15 minutes.

3 (A recess was taken from 10:30 a.m. until
4 11:02 p.m.)

5 THE COURT: The jury may be
6 seated. Mr. Wagner, continue, please.

7 MR. WAGNER: Thank you, your
8 Honor.

9 CROSS EXAMINATION, (Continuing)

10 QUESTIONS BY MR. RICHARD D. WAGNER:

11 Q Dr. Myers, would you agree with me that
12 noncompliance with a doctor's advice is a
13 common phenomenon throughout medicine?

14 A For some types of advice, yes.

15 Q And just as an example, with regard to doctors'
16 advice regarding diet and obesity, many
17 patients don't follow their doctor's advice to
18 reduce their caloric intake; would you agree
19 with me?

20 A That is correct.

21 Q Many of them don't follow their doctor's advice
22 to engage in exercise programs; isn't that
23 correct?

1 A That's correct.

2 Q And many heart patients who have cardiac
3 problems don't follow their doctor's advice to
4 engage in exercise and to restrict their diet,
5 correct?

6 A Now you're moving over the border here,
7 Counselor. For heart disease patients it's
8 very important that they get very specific
9 advice on exercise and so on, because for some
10 types of heart disease, you don't want the
11 patient exerting himself in an exercise program
12 without a lot of controls placed on it. So, it
13 depends on what type of advice you're talking
14 about.

15 If it's just general advice to exercise
16 for heart disease patients, that's not advised
17 and they should speak specifically to a
18 physician or whoever she or he refers them to
19 to get better advice.

20 Q Yes, sir. The only question I was asking
21 really, Dr. Myers, was with respect to heart --
22 you were talking about people on diets and I
23 was simply asking you, isn't it true with

1 respect to people who have heart problems, that
2 they sometimes don't follow their doctor's
3 advice to only eat certain kinds of foods or to
4 get more exercise. That's all I'm asking you.
5 Is that a correct statement?

6 A That's correct.

7 Q And so it's true, isn't it, Doctor, that the
8 mere fact that an individual smoker continues
9 to smoke in the presence of the knowledge of
10 the health risk associated with his continued
11 smoking, that in and of itself doesn't prove
12 that that smoker is addicted; isn't that
13 correct?

14 A Addiction is not a phenomena, Counselor, that
15 is advice-dependent. Addiction is a
16 physiologic phenomenon.

17 Q I'm just asking you whether or not the question
18 that I just asked you is a correct statement.

19 A Could you repeat the question?

20 Q Sure. The mere fact that an individual smoker
21 continues to smoke in the presence of the
22 knowledge of the health risk associated with
23 his continued smoking is not itself proof that

1 the smoker is addicted. You, in fact, agree
2 with that statement, don't you, Doctor?

3 A That is correct.

4 Q And, Doctor, it's a fact, isn't it, that many
5 people who stop smoking do so on their own
6 without any specific technique to help them
7 stop?

8 A Yes.

9 Q Pardon me?

10 A Yes.

11 Q It's a fact, isn't it, Doctor, that smoking
12 doesn't prevent a person from appreciating the
13 risks of smoking?

14 A Appreciating, yes. Acting on, no.

15 Q Well, let me reask the question, because I only
16 want to get an answer to my question, Doctor.
17 The question is: It's a fact that smoking does
18 not prevent a person from appreciating the risk
19 of smoking; isn't that a correct statement?

20 A I guess I don't understand what you mean by
21 appreciating, because my definition of
22 appreciating probably doesn't match up with
23 yours.

- 1 What page do you want me to look at?
- 2 Q 144, line 5. Let me know, Doctor, when you're
- 3 there.
- 4 A 144, line 5?
- 5 Q Yes, sir. Would you like to read the question
- 6 and answer out loud?
- 7 A If by --
- 8 Q No, no, you have to read the question first,
- 9 Doctor.
- 10 A "Does smoking rob a person of his or her
- 11 ability to appreciate the risks associated with
- 12 it?" Answer: "If by inability to appreciate
- 13 you mean knowledge of negative effects, the
- 14 answer is no."
- 15 Q We didn't have any problem understanding that
- 16 question at your deposition, did we, Doctor?
- 17 A With the caveat I placed in there, I think I
- 18 made my point, Counselor. That is that
- 19 appreciate can be defined in a variety of ways.
- 20 If you define it as I stated it in the
- 21 deposition, the answer is no.
- 22 Q All right, thank you. I appreciate that.
- 23 Doctor, smoking doesn't prevent a person from

1 making a decision to quit smoking either; isn't

2 that correct?

3 A That is correct.

4 Q And, Doctor, it's a fact that people who smoke

5 can quit?

6 A Yes.

7 Q And it's a fact, isn't it, Doctor, that not all

8 smokers become addicted or dependent upon

9 cigarettes?

10 A Yes, that is good, thank goodness.

11 Q In fact, Doctor, I believe it's the case, isn't

12 it, that you never told any patient of yours

13 that you thought, in your opinion, was addicted

14 that they could not control their smoking? You

15 never said that to any patient of yours, have

16 you?

17 A I have never stated those words to a patient

18 that I can ever recall.

19 Q You've never told anyone that they could not

20 quit smoking, have you?

21 A No, I've never told anyone that. In fact, I've

22 told them the exact opposite.

23 Q In fact, motivation is a very important part of

1 stopping smoking; isn't that correct?

2 A It is a very important component, yes.

3 Q It's a fact, isn't it, Doctor, that in your
4 opinion smoking can be a difficult practice to
5 stop that's long been a matter of common
6 knowledge?

7 A Yes, that's true, too.

8 Q It's a fact, isn't it, that according to the
9 Surgeon General's Report, there were in excess
10 of 38 million former smokers in the United
11 States?

12 A Is that in here?

13 Q In the 1990 Surgeon General's Report it was
14 reported that there was in excess of 38 million
15 former smokers in the United States?

16 A I won't dispute that, that's probably correct.
17 It also went on to say that a number of people
18 who had smoked died in the period of time in
19 question as well.

20 Q It's a fact, isn't it, Doctor, that the 1989
21 Surgeon General's Report stated that nearly
22 half of all living adults who ever smoked had
23 quit?

1 A It was maybe half or third, something like
2 that.

3 Q You do agree, don't you, Doctor, with the
4 statement from the 1988 Surgeon General's
5 Report that approximately 90 percent of former
6 smokers reported quitting without any formal
7 treatment program or smoking cessation devices?

8 A Of those who quit, yes.

9 Q Do you agree, Doctor, that most smokers don't
10 require any treatment for nicotine withdrawal
11 when they quit?

12 A That's correct, if by treatment you mean
13 medical treatment.

14 Q You agree, Doctor, do you not, that researchers
15 say that for the vast majority of smokers who
16 quit, the effect of nicotine withdrawal is
17 quite mild?

18 A I wouldn't characterize it as quite mild. It
19 is certainly milder than quitting other drugs,
20 but for some patients it is quite intense.
21 I --

22 Q I'm sorry, Doctor, I didn't mean to interrupt.
23 Go ahead.

1 A In summary I would say that for the majority of
2 people, it is mild.

3 Q I think that was the question I asked. Doctor,
4 it's true, isn't it, that people who go on a
5 diet and curtail their intake of food may
6 experience the same withdrawal symptoms as
7 someone who stops smoking?

8 A No.

9 Q Disagree with that?

10 A I think that it's a very different phenomenon,
11 Counselor. I think that the major difference
12 I'd point out is that food is something that
13 you need to live, it's not a drug. Nicotine is
14 a drug that you don't need to live. In fact,
15 it kills you ultimately unfortunately. So, I
16 wouldn't equate the two in that way.

17 Q Doctor, if you'll look at the answer that you
18 gave starting at the bottom of page 181 and
19 over to the top of 182 when you were asked
20 about people who go on a diet and have to
21 severely curtail their intake of food. The
22 question was about whether or not those
23 withdrawal symptoms are comparable to those

1 that you identified as being associated with
2 the cessation of cigarette smoking. And you
3 said: "No, I didn't say that. I think it's
4 possible that they can experience some
5 symptoms. It is not guaranteed they will
6 experience symptoms. Those symptoms may or may
7 not be similar to the symptoms that some
8 patients will experience when they withdraw."

9 The question I asked you, Doctor, was:
10 Isn't it true that people who go on a diet and
11 curtail their intake of food may experience the
12 same withdrawal symptoms as someone who stops
13 smoking?

14 A Counselor, there may be some overlap of
15 starvation with withdrawal, but I don't think
16 that's an example that I would find easy to
17 relate to tobacco withdrawal.

18 Q Was the answer that you gave in your deposition
19 correct at the time you gave it --

20 A Excuse me, Counselor, that's a quote from my
21 deposition, page 181.

22 Q You're quoting from where?

23 A Page 181, the page that you referred me to.

1 "There may be some overlap in starvation with
2 withdrawal, but I don't think that's an example
3 that I would find easy to relate to tobacco
4 withdrawal."

5 Q Yes, sir. Then you were asked a question: "So
6 it's your testimony that a person who is on a
7 diet, say an obese person who has to go on a
8 diet and severely curtail their intake of food,
9 that that person won't experience any
10 withdrawal symptoms that are comparable to what
11 you've identified as the symptoms being
12 associated with the cessation of cigarette
13 smoking."

14 And you answered: "No, I did not say
15 that. I think it's possible that they can
16 experience some symptoms. It's not guaranteed
17 they will experience symptoms. Those symptoms
18 may or may not be similar to the symptoms that
19 some patients will experience when they
20 withdraw."

21 A There is not a one-to-one correlation.

22 Q Yes. So wasn't your answer very fairly,
23 Doctor, that they may experience the same kind

1 of symptoms as people who withdraw from

2 smoking?

3 A With the caveats that we have now outlined,

4 yes.

5 Q Thank you. Now, Doctor, I want to ask you some

6 questions about your testimony here this

7 morning about the association between smoking

8 and lung cancer, some of the questions

9 Mr. Holland asked you about, okay?

10 Doctor, it's correct, isn't it, that you

11 yourself have never conducted any study on the

12 association between cigarette smoking and lung

13 cancer?

14 A That is correct.

15 Q And would you agree with me that the term

16 "pathology" relates to the science of the

17 origin, nature and course of diseases?

18 A Yes.

19 Q Is it the fact that aside from a pathology

20 course that you had in medical school, that you

21 had no study or training in pathology or

22 practice in pathology?

23 A No, that's not correct. In an internal

1 medicine residency, part of the residency is
2 involved with discipline in pathology,
3 psychiatry, some of the other disciplines that
4 make up the spectrum of diseases that are in
5 adult medicine.

6 Q So, if I were -- I'm sorry.

7 A The specific kind of training would be that you
8 have a patient with, let's say, a leukemia and
9 you would go -- you'd perform a bone marrow
10 aspiration and biopsy. Then when the
11 pathologist had finished fixing the slides and
12 staining them, then you would go down to the
13 pathology department and look at the slides
14 with the pathologist and your attending
15 physician in order to determine whether or not
16 the bone marrow did indeed have leukemia and
17 what type it was.

18 So, that is an example of the kind of
19 pathologic training that you get as a resident.
20 You look at slides of your cancer patients and
21 so on as well.

22 But the discipline pathology and the
23 residency pathology pretty much does that kind

1 of thing full time, whereas internal medicine,

2 it's very much just a part of the residency.

3 Q All right, sir. Well, let's see if I can sort

4 of make through that a little bit. You don't

5 hold yourself out as a pathology expert, do

6 you, sir?

7 A That's correct.

8 Q You don't hold yourself out as an expert in

9 radiology either; isn't that correct?

10 A That is correct.

11 Q Doctor, it's a fact, isn't it, that, of course,

12 all smokers don't contract lung cancer, right?

13 A That is correct.

14 Q Would you agree with me, Doctor, that there's

15 no scientific understanding of the precise

16 mechanism of how lung cancers are caused?

17 A There is much more understanding of that

18 mechanism today than there's ever been, but if

19 you're asking a question do scientists truly

20 understand every nuance of how the transition

21 from a normal cell to a cancer cell occurs, the

22 answer is no, science is not to that point yet.

23 Q In fact, science doesn't know why one cell

1 turns malignant and another cell subject to the

2 same agent does not; isn't that correct?

3 A Science has ideas on how that occurs, but there

4 is no certainty at this point on the precise

5 mechanism, although we're getting closer.

6 Q You would agree, Doctor, that radiation causes

7 lung cancer?

8 A In very high doses, radiation can cause some

9 cells to mutate and become cancerous, yes.

10 Q And air pollution can be a cause of lung

11 cancer?

12 A That's a matter of more dispute. I think that

13 most experts would believe that there is some

14 contribution that air pollution makes over long

15 periods of time in highly polluted areas to the

16 overall incidence of cancer, but it is very

17 difficult, I think, for you to attribute air

18 pollution to an individual cancer patient.

19 Although there may be some examples that I am

20 not aware of.

21 Q Doctor, you, in fact, wrote an article in

22 August of 1985 in Public Health Notes about air

23 pollution and air pollution causing lung

1 cancer, didn't you?

2 A I may have suggested that in the article, yes.

3 MR. WAGNER: May I approach the
4 witness, your Honor?

5 THE COURT: Yes, you may.

6 Q I know it's not easy to remember everything.

7 Here is a copy that I believe is an article
8 which you wrote, Doctor. If you want to take a
9 minute to review that, please do.

10 A Uh-huh. I don't think there's anything
11 inconsistent with what I just said. There's
12 some evidence that air borne toxicants
13 contribute to the increase rate of
14 cancer-related mortality.

15 Q This article, Doctor, just generally speaking,
16 is about air pollution and its association with
17 lung cancer, correct?

18 A The article was intended to explain to
19 physicians and others interested in public
20 health how the Clean Air Act that requires
21 regulations for toxic air pollutants affects
22 health and what the goals of the Clean Air Act
23 were with respect to health.

1 Q See the third column over, Doctor?

2 A Right.

3 Q As you and I are looking at it, the first full
4 paragraph. It says: "The level of pollution,
5 age and gender have an impact on cancer
6 mortality rates."

7 A That's correct.

8 Q "Heavily industrialized and highly polluted
9 rural areas have much greater cancer mortality
10 rates than rural or less polluted areas,"
11 right?

12 A Right. But that's not limited to air
13 pollution, Counselor. That's water pollution,
14 et cetera.

15 Q Whether it's water pollution or air pollution,
16 those things can be factors in the cause of
17 lung cancer, right?

18 A They can be, yes.

19 Q Would you agree with me, Doctor, that no
20 specific constituent in tobacco smoke has been
21 identified as responsible for causing lung
22 cancer?

23 A There are thousands of constituents in tobacco

1 smoke that are believed to be related to lung
2 cancer. The question of any one specifically
3 being identified as the cause is still subject
4 to a lot of research.

5 Q Okay. And, in fact, there are many things that
6 can cause lung cancer in nonsmokers; isn't that
7 correct?

8 A Primary lung cancer? The overwhelming majority
9 of primary lung cancer is tobacco-related,
10 Counselor. There are relatively few, in fact,
11 somewhere between only 5 to 15 percent of lung
12 cancers that are primary lung cancers occur in
13 patients that don't smoke. And those are
14 specific cell type, not the type that's related
15 to tobacco. In fact, there are three or four
16 major types related to tobacco and there a
17 couple that aren't. The patients that don't
18 smoke by and large have the type that's not.

19 Q Perhaps it's the question I asked, Doctor, that
20 wasn't clear. Let me try to reask it again.
21 I'm sorry if I didn't make it clear.

22 My question was that there are many things
23 that can cause lung cancer in nonsmokers and

1 whether or not you agreed with that statement.

2 A Well, what kind of lung cancer are you talking
3 about, Counselor? Are you talking about small
4 cell, anaplastic, large cell, epidermoid or
5 what?

6 Q I can only ask one question at a time. I just
7 wanted to ask if you agree with that statement.

8 A I can't answer the question without being more
9 specific or without giving you a better
10 explanation of my answer.

11 Q Well, Doctor, do you recall being asked that
12 same question at your deposition?

13 A What page?

14 Q 357.

15 A Yeah.

16 Q Line 11 you were asked: "Do you know the cause
17 of lung cancer in nonsmokers?" You answered:
18 "There can be many causes of lung cancer in
19 nonsmokers." And you said, "Exposure to
20 protected or chemical agents, hereditary
21 factors, metastatic disease are among those,"
22 right?

23 A Right, but that doesn't necessarily apply to

1 primary lung cancers. It certainly doesn't
2 apply to all the different cell types, but it
3 does apply in general to lung cancer.

4 Q All right, thank you. And it's your opinion
5 that here in the state of Indiana that radon is
6 a cause of lung cancer?

7 A Radon can be a contributing factor to the
8 overall cancer mortality rate, although that
9 evidence is clearly in dispute today. The
10 Environmental Protection Agency and others are
11 questioning the earlier research that's being
12 done on radon, so I think it's fair to say that
13 the thinking regarding the contribution that
14 radon makes to cancer morbidity/mortality is in
15 flux.

16 I think that the general medical opinion
17 today is that it's better to err on the side of
18 caution, and if you can control radon, to do
19 so. However, we're fortunate, Counselor, here
20 in Indiana that the radon levels are relatively
21 low compared to other states.

22 Q That's your opinion, isn't it, Doctor, and you
23 so testified in your deposition that in the

1 state of Indiana radon can be a contributing
2 cause of lung cancer?

3 A If you're asking me is it possible, my answer
4 is yes.

5 Q I'm sorry, I was asking whether or not it's
6 your opinion that here in the state of Indiana
7 radon can cause lung cancer. That's what you
8 testified to in your deposition, didn't you,
9 sir?

10 A I don't remember the exact words, but I think
11 I've answered your question. I think it can be
12 a contributing factor.

13 Q Okay. Thank you. Doctor, would you agree with
14 me that factors that cause lung cancer in
15 nonsmokers can also cause lung cancer in
16 smokers?

17 A Factors that cause lung cancer in nonsmokers
18 can cause lung cancer -- sure. If you have a
19 patient that has an exposure to a particular
20 toxic chemical that induces a mutation in the
21 cell or if you have a patient that has a
22 particular hereditary predisposition to one of
23 the rare types of cancers like angiosarcoma,

1 that can occur in a patient who smokes, but
2 it's very, very unusual. But, sure, it can
3 happen.

4 There is a rule in medicine, Counselor,
5 you never say always or never. There are
6 always some exceptions to the rule.

7 Q Let me shift our focus here for just a moment,
8 Dr. Myers. Let's talk for a moment about
9 smoking cessation in general.

10 A All right.

11 Q You agree, do you not, that smoking cessation
12 has major and immediate health benefits for men
13 and women of all ages?

14 A Yes, I think that's a fair statement.

15 Q And it's also your opinion and you agree with
16 the statement that the risk of a person
17 contracting lung cancer decreases significantly
18 within five to ten years of stopping smoking?

19 A It certainly does go down, and that's exactly
20 the reason we want patients to stop smoking to
21 reduce their risk. Unfortunately, it never
22 gets to zero.

23 Q You also agree, don't you, Doctor, that for

1 most smokers who stop smoking, after 15 to 20
2 years that their risk of lung cancer is only
3 slightly above that of the population that
4 never smoked?

5 A I think that's a fair statement of the
6 literature. Fifteen to twenty years of zero
7 smoking and nonexposure to others as secondary
8 smoke can bring your risk down substantially.
9 Never equalling nonsmokers, but getting as
10 close as possible.

11 MR. WAGNER: Okay, thank you,
12 Doctor.

13 THE COURT: Further cross exam?

14 MR. SHEFFLER: No questions, your
15 Honor.

16 MR. KEARNEY: No questions, your
17 Honor.

18 MR. HARDY: No thank you, your
19 Honor.

20 THE COURT: Redirect?

21 REDIRECT EXAMINATION,

22 QUESTIONS BY MR. MICHAEL W. HOLLAND:

23 Q Dr. Myers, you were asked about whether there

1 were any questions concerning the precise
2 mechanism by which a healthy cell turns into a
3 cancerous cell and you made your answer.

4 Does any doubt about that precise
5 mechanism affect your opinion that cigarette
6 smoking is a cause of lung cancer?

7 A Not at all.

8 Q Can you explain why?

9 A Well, precise mechanisms, I mean if you're
10 talking about the biochemical level, what
11 happens from A to B to C to D and the different
12 steps towards a mutated cell, we are not yet
13 able in science to specify each of those
14 interactions within the cell.

15 But we do know that there is a very strong
16 association between nicotine addiction,
17 cigarette smoking and lung cancer. And you
18 don't have to prove the precise cellular
19 mechanism, in my opinion, in order to know that
20 there is a causal relationship.

21 Q Doctor, you were asked about your experience
22 and involvement with the hospital which
23 continues. Can you explain how much of your

1 time is involved in seeing patients?
2 A I would say -- the shift is about six and a
3 half hours, and I said it's about -- on average
4 twice a month in the emergency room setting.
5 There's some preparation work. Occasionally
6 you'll have to come back to the hospital to
7 check on a lab result or check on an x-ray that
8 wasn't done at the time you left just to make
9 sure of something or other, but. That's in
10 terms of the hours that I physically am there
11 actually taking care of patients with my
12 stethoscope on, that's about it.

13 There are a number of other hours that I
14 put in to teaching rounds and/or grand rounds
15 where the patient isn't necessarily there but
16 the house staff and students are there.
17 Q Can you explain why you remain involved in that
18 capacity?

19 A Because I consider myself a physician first and
20 everything else I do is secondary. I was
21 trained to be a doctor. I think that's very
22 important for me to keep those skills as highly
23 honed as possible, and this is the best way for

1 me to do it and do the other -- or take care of
2 the other responsibilities that I have on these
3 committees and boards and The Associated Group
4 office.

5 Q Are you compensated for your work at the
6 hospital?

7 A No, I am not. I am -- although I'm a clinical
8 associate professor of medicine, all of the
9 money that is billed in my name goes to the
10 university and is donated back by me. I do
11 not -- I do not receive any remuneration from
12 the I.U. Medical Center for the work that I do,
13 nor have I ever.

14 Q In connection with your work with patients, do
15 you have occasion to see patients who are
16 nicotine addicted?

17 A Yes.

18 Q Why is it that you don't tell patients that
19 they can't quit?

20 A Because you very much want them to do all they
21 can to try to quit. You don't want to defeat
22 them. Sometimes you use sort of the reverse --
23 what some people refer to as reverse psychology

1 technique, especially when you get a certain
2 patient type, especially guys, who behave
3 differently in my clinical experience than
4 women who smoke in some cases. You tell them
5 that they can't do something and they'll try to
6 do it just to prove you wrong.

7 But I never tell anybody that they
8 absolutely, positively can't stop because I
9 want them to do everything they can to stop.
10 As I, I think, I testified to before, I don't
11 really care whether they use mechanism A or B
12 or C as long as we get to the point where they
13 are no longer ingesting nicotine and they get
14 that -- see, what happens, of course, when you
15 take nicotine, the studies have shown that it
16 stays in your body for a long period of time,
17 so you smoke and the nicotine stays there for
18 24 hours or longer and starts coming down and
19 then they start smoking again. You don't want
20 that.

21 You've got to break that cycle in some way
22 to get it down and have it stay down. Any way
23 they can do that to get past that difficult

1 point, I want them to try to do.

2 Q Doctor, you were asked whether all smokers lack
3 voluntary control over their smoking and you
4 answered no. Are there some smokers who do
5 lack voluntary control over their smoking?

6 A There are many who do, as evidenced by the fact
7 that a third to a half of the people in any
8 given population try to quit each year. They
9 know the health consequences. They know that
10 it's harming the environment in their homes.
11 They know that it's something that they
12 shouldn't do for a variety of reasons, and they
13 try to quit and they can't, because they're
14 addicted. Those patients haven't been able to
15 find the mechanism to overcome their addiction.
16 Q Doctor, you were asked about your own smoking
17 in the past. Could you explain how much you
18 smoked?

19 A On average, it was never more than two or three
20 cigarettes a day. I was highly embarrassed by
21 the fact that I continued to do that. I hid it
22 from everyone that I could hide it from. I
23 know that that was -- I knew that that was the

1 wrong thing to do, yet I guess it proved that I
2 was a human being as well, and I ultimately
3 made the decision to do the right thing, and
4 fortunately I have been very successful since
5 that point in time in that arena.

6 Q Doctor, you were asked whether you are a
7 psychiatrist. Is addiction the exclusive
8 province of psychiatry?

9 A If it was, then very few people would ever get
10 help, because there are so few psychiatrists
11 that see so many of the patients that are
12 addicted to nicotine and other drugs. In fact,
13 I would suggest to you, Counselor, that the
14 majority of people that are addicted to heroin,
15 other opiates, cocaine and so on, see
16 internists, emergency room physicians and
17 family practitioners primarily and not
18 psychiatrists. I think the same holds true
19 with nicotine, although clearly psychiatry has
20 a role for some patients, and for some
21 patients, if they think that's going to help
22 them, I'm the first one to sign the referral
23 form to get them that help. But there are not

1 enough psychiatrists to go around. They cost
2 money. A lot of the insurance plans
3 unfortunately don't cover that for a variety of
4 reasons, and therefore it falls to the family
5 practitioner, the internist and the emergency
6 room docs.

7 Q Doctor, I am going to show you what's been
8 marked as Plaintiff's Exhibit 10 and ask you if
9 you can identify that.

10 A This is the most recent version of my
11 curriculum vitae.

12 MR. MICHAEL HOLLAND: At this
13 time, plaintiffs would offer Plaintiff's
14 Exhibit 10.

15 MR. WAGNER: Mike, is there any
16 difference between this one and the --

17 MR. MICHAEL HOLLAND: No, it's
18 the same one.

19 MR. WAGNER: We have no
20 objection.

21 THE COURT: Show Plaintiff's
22 Exhibit 10 -- I guess just Exhibit 10, it
23 should be, admitted into evidence.

1 MR. MICHAEL HOLLAND: May I pass

2 it to the jury? And I have a picture as well.

3 THE COURT: Yes, great. Thank

4 you.

5 MR. MICHAEL HOLLAND: That's all

6 we have.

7 THE COURT: Recross, Mr. Wagner.

8 RECROSS EXAMINATION,

9 QUESTIONS BY MR. RICHARD D. WAGNER:

10 Q Just a couple of brief questions, Doctor.

11 A There's a mistake here.

12 Q I'm sorry.

13 A Well, just a minor one. I'm just looking at

14 this, my daughters -- I mean the ages of my

15 kids have gone up.

16 Q That's a problem, Doctor, that we all have.

17 A Yes.

18 Q Especially as they approach college and all

19 those things. Just a couple of questions,

20 Doctor.

21 A All right.

22 Q You told me during my examination that

23 motivation of someone who attempts to quit is a

1 very important factor; am I right?

2 A Yes, Counselor, it is.

3 Q And I think -- and I tried to make a very

4 careful notes here during Mr. Holland's

5 questioning of you, and I believe you said that

6 there were several different methods that could

7 be used by people who wanted to smoke; they

8 could just quit cold turkey or other methods,

9 and you said that they all have some usefulness

10 in quitting smoking, right?

11 A I believe so, yes.

12 Q And you said if one doesn't work, you keep

13 pushing, right?

14 A Yes, sir.

15 Q As my note says, because one of the methods can

16 and will work, right?

17 A That's what we want the patient to believe.

18 Q And you said one of the methods can and will

19 work, right?

20 A If that's what the transcript says, then I said

21 it.

22 MR. WAGNER: Thank you.

23 MR. MICHAEL HOLLAND: Doctor, are

1 there smokers with whom --

2 MR. KEARNEY: Your Honor, I've
3 got some recross.

4 THE COURT: Oh, I'm sorry, so
5 does Mr. Holland. Yes, you may proceed.

6 MR. KEARNEY: I know I'm quiet
7 over here in the corner.

8 RE CROSS EXAMINATION,

9 QUESTIONS BY MR. JAMES V. KEARNEY:

10 Q Very, very briefly, Doctor. You gave some
11 testimony in answer to Mike's questions about
12 people who try to stop smoking and can't. You
13 said there was a large number of people who try
14 to stop smoking and can't.

15 Am I correct that you were a person who
16 smoked and then you stopped, correct?

17 A Yes, that's correct.

18 Q Then you started again?

19 A That's correct.

20 Q So you were one of these people who stopped for
21 a period of time and then went back to smoking;
22 am I correct?

23 A That's correct, but the difference is I wasn't

1 addicted.

2 Q Okay. Now, let me ask this question. So you
3 were not one of these people who you would say
4 could not stop smoking; is that right?

5 A That's correct.

6 Q When you went back to smoking, it wasn't
7 because you couldn't keep abstinent, if you
8 will, is that right? You just chose to go back
9 to smoking; am I right?

10 A Well, could you ask that question again? Let
11 me hear your words one more time.

12 Q Okay. The issue is whether or not people who
13 go back to smoking, go back to smoking because
14 they can't keep abstinent or because they don't
15 want to keep abstinent.

16 My question to you is this: You were a
17 smoker, correct?

18 A Correct.

19 Q You quit?

20 A Correct.

21 Q All right. Then at some point in time you
22 decided not to keep abstinent, you decided to
23 smoke again; am I right?

1 A That is correct.

2 Q You would not characterize yourself as a person
3 who could not quit; am I right?

4 A That is correct.

5 Q One other question. Those people who you say
6 try to stop and they can't, you agree with me
7 that some of those people when they try again
8 do in fact quit and quit permanently; isn't
9 that right?

10 A Absolutely, yes, that's true.

11 MR. KEARNEY: No further
12 questions.

13 THE COURT: Any further recross?
14 No?

15 REDIRECT EXAMINATION,

16 QUESTIONS BY MR. MICHAEL W. HOLLAND:

17 Q Doctor, are there certain patients who are
18 addicted and who despite their best effort are
19 unable to quit?

20 A Yes.

21 MR. MICHAEL HOLLAND: Thank you.

22 THE COURT: Recross? Further
23 questions, defendants?

1 RECROSS EXAMINATION,

2 QUESTIONS BY MR. RICHARD D. WAGNER:

3 Q It's all a matter of motivation, isn't it,

4 Doctor?

5 A No, it's not all a matter of motivation,

6 Counselor. It's a matter of addiction. That's

7 the difference. And if you'd like for me to

8 explain further, I'd be pleased to.

9 MR. WAGNER: Thank you, Doctor.

10 THE COURT: Further questions?

11 Plaintiff?

12 MR. MICHAEL HOLLAND: No, your

13 Honor.

14 THE COURT: Defendants? Thank

15 you, Dr. Myers. You may step down.

16 Counsel, approach the bench for a

17 scheduling conference, please.

18 (A discussion was held off the record.)

19 THE COURT: We're going to break

20 for lunch at this time, and Shelly has been

21 trying feverishly to get you reservations at

22 the Aluminum Room. No, I guess that's not

23 right. She'll tell you what that is.

1 So we're going to take a break now for
2 lunch, and because we're being allowed to
3 separate, please remember your admonition,
4 you're not to discuss this case among
5 yourselves or permit it to be discussed with
6 you by anyone. You're to continue to keep an
7 open mind until you've heard all the evidence,
8 final instructions and the final arguments of
9 counsel.

10 With that, the jury may rise, you may
11 retire, and we'll be in recess until 12:50.

12 (At 11:43 a.m., the trial proceedings
13 recessed, to reconvene at 12:50 p.m.)
